PROFESSIONAL SUMMARY

Results-driven DevOps / Cloud Engineer with 3.5 years of hands-on experience designing and operating cloud-native platforms on AWS and Azure in high-compliance banking and legal-tech environments. Proven expertise in Kubernetes (EKS/AKS), Terraform IaC, CI/CD pipeline automation (Jenkins, GitLab CI, GitHub Actions), and production observability with Prometheus, Grafana, and ELK. Delivered 99.9% system availability, 40% faster deployment cycles, and 20% cloud cost reduction across enterprise-scale platforms. AWS Certified DevOps Engineer – Professional and AWS Certified Cloud Practitioner. Currently completing MSc in Computing Science at Griffith College Dublin, with a dissertation on AI-driven predictive CI/CD failure detection — a unique differentiator for DevOps, SRE, and Platform Engineering roles.

CORE TECHNICAL SKILLS

CI/CD & Automation: Jenkins, GitLab CI, GitHub Actions, Azure DevOps, CircleCI, ArgoCD	Cloud Platforms: AWS (EKS, EC2, S3, RDS, VPC, CloudFormation, CDK), Azure, GCP
Containerisation: Docker, Kubernetes, Helm, AWS EKS, Azure AKS	Infrastructure as Code: Terraform, Ansible, CloudFormation, ARM Templates, AWS CDK
Observability & Monitoring: Prometheus, Grafana, ELK Stack, Datadog, OpenTelemetry, CloudWatch	DevSecOps & Security: RBAC, IAM Policies, HashiCorp Vault, Security as Code, SSL/TLS, Zero-Trust
Scripting & Programming: Python, Bash, Java	Version Control & GitOps: Git, GitHub, GitLab, Bitbucket, GitOps workflows
Methodologies: Agile / Scrum, SRE principles, GitOps, Incident Management, FinOps	Cloud Networking: AWS VPC, Security Groups, IAM Policies, DNS, Load Balancers

CERTIFICATIONS

AWS Certified DevOps Engineer – Professional | Amazon Web Services

AWS Certified Cloud Practitioner | Amazon Web Services

PROFESSIONAL EXPERIENCE

DevOps Engineer Cognizant Technology Solutions – Client: LexisNexis (RELX Group)	Mar 2023 – Jan 2025 Hyderabad, India
- Architected and maintained CI/CD pipelines using Jenkins and GitLab CI, reducing manual deployments by 45% and increasing release frequency across 6+ product teams serving global legal-tech customers. - Provisioned and managed 5–10 cloud environments 60% faster by engineering reusable Terraform modules for AWS and Azure, ensuring consistency across dev, staging, and production tiers. - Optimised AWS/Azure platforms via rightsizing, auto-scaling policies, and reserved instance planning — cutting cloud infrastructure spend by 20% while maintaining 99.9% SLA commitments. - Improved system uptime by 30% through proactive monitoring, auto-scaling configurations, and performance tuning; integrated Prometheus and Grafana dashboards achieving 20% faster MTTR. - Implemented Kubernetes (EKS/AKS) orchestration and Docker containerisation, raising deployment efficiency by 40% and optimising resource utilisation across containerised workloads. - Integrated DevSecOps controls, RBAC policies, and compliance gates into CI/CD pipelines, reducing security incidents by 25% across internal data platforms and tooling. - Collaborated cross-functionally with development, security, and QA teams to streamline release processes, cutting deployment failures by 35% and accelerating release cadence.	
DevOps Engineer Cognizant Technology Solutions – Client: Kotak Mahindra Bank	Sep 2021 – Mar 2023 Hyderabad, India
- Built and maintained CI/CD pipelines using Jenkins, GitLab CI, and Azure DevOps in a regulated banking environment, reducing deployment time by 40% and improving release stability by 35%. - Automated cloud infrastructure provisioning with Terraform, CloudFormation, and ARM Templates — eliminating 60% of manual configuration errors and ensuring regulatory compliance across AWS and Azure.	

- Managed AWS and Azure production environments maintaining 99.9% system availability and reducing infrastructure costs by 20% through proactive capacity planning and FinOps practices.
- Implemented Docker and Kubernetes container orchestration, increasing deployment frequency by 45% and improving application scalability and resilience across microservices workloads.
- Embedded DevSecOps practices and security scanning into CI/CD pipelines, reducing vulnerabilities by 40% in line with banking-grade compliance standards (RBI / BFSI sector).
- Authored and maintained Python and Bash automation scripts, reducing manual operational effort by 50% across Linux-based production systems.
- Led incident response and root cause analysis, reducing MTTR by 35% through structured monitoring with Prometheus, Grafana, and the ELK Stack.

KEY PROJECTS

MSc Dissertation: AI-Driven Predictive CI/CD Failure Detection & Auto-Remediation | Griffith College Dublin

Jan 2026 – Present | Dublin, Ireland

- Designed and implemented an ML-powered system to predict CI/CD pipeline failures before occurrence and trigger automated remediation — targeting 60% reduction in pipeline downtime.
- Built end-to-end CI/CD pipelines using Jenkins and GitHub Actions across containerised Kubernetes environments with Build, Test, Dockerise, and Deploy stages.
- Engineered ML feature pipeline capturing build logs, test results, and execution metrics; trained Random Forest and XGBoost models achieving a predictive failure risk score per pipeline run.
- Implemented decision engine for automated remediation — re-running failed tests, retrying builds, and rolling back Kubernetes deployments when risk exceeds defined threshold.
- Delivered end-to-end observability using OpenTelemetry (logs, metrics, traces) and a live dashboard for incident reporting and operational visibility.

EDUCATION

MSc in Computing Science — Griffith College Dublin

Jan 2025 – Present | Dublin

B.Tech in Computer Science — SRKR Engineering College

Jun 2018 – Aug 2021 | India

KEY ACHIEVEMENTS

- 40% faster deployment cycles achieved by redesigning Jenkins/GitLab CI pipelines with parallel stages and automated rollback gates across banking and legal-tech platforms.
- 99.9% system availability maintained across regulated AWS and Azure environments serving enterprise-scale clients in fintech and legal-tech sectors.
- 60% reduction in infrastructure provisioning time through reusable Terraform module library, eliminating manual errors and ensuring repeatable environment delivery.
- 25% reduction in security incidents by embedding DevSecOps controls, RBAC enforcement, and compliance gates into CI/CD workflows on banking-grade pipelines.
- 20% cloud cost reduction via rightsizing, auto-scaling policies, and reserved instance strategies across multi-account AWS/Azure environments.
- AI-powered CI/CD failure prediction system (MSc dissertation) designed to reduce pipeline downtime by 60% using ML models (Random Forest, XGBoost) and automated Kubernetes remediation.
